Summary

Backend Software Engineer with 2 years of experience building scalable backend services using Spring Boot. Experienced in designing event-driven architectures with Kafka and implementing highly available, fault-tolerant systems. Committed to optimizing API performance and ensuring system scalability and reliability.

Skills

Programming Languages: Java, Python, JavaScript, TypeScript
Frameworks & Libraries: Spring Boot, Flask, Express, React
Databases: PostgreSQL, MySQL, Redis, Kafka, MongoDB, Firebase
DevOps : Linux, GitHub Actions, Docker, Kubernetes, AWS(S3, EC2, SQS, RDS)

Work Experience

Associate Software Engineer - BitriaTech Pvt. Ltd. *Feb 2025 - Oct 2025*

- Developed and scaled **3** core services, leveraging Kafka-based asynchronous inter-service communication
- Implemented **ONDC protocol** for agriculture services, enabling seamless interoperability between buyers, sellers, and logistics providers
- Achieved **99.9% availability** by implementing Retry and Circuit Breaker patterns to stop cascading failures.
- Cut API latency by **30%** using caching and SQL query plan analysis to boost throughput under high load
- Designed scalable database schemas to support **2x growth** in transactional data, handling **1M+ rows** while maintaining query execution times under **50ms**
- Streamlined CI/CD with Docker/K8s, reducing deployment time by **60%** using layer caching

Backend Developer - Techostinger India Pvt. Ltd. *June 2024 - Dec 2024*

- Owned end-to-end backend development and RESTful API design, implementing GitLab CI pipelines for automated deployment
- Engineered a real-time chat system using WebSocket and Redis, supporting **1,000+** concurrent connections
- Optimized user activity tracking, reducing database write operations by **70%** for real-time "last seen" updates.
- Built an asynchronous media pipeline via AWS S3 and SQS, offloading heavy file processing to reduce main-thread load by **80%**
- Authored **150+** unit and integration tests using Vitest/Supertest, achieving **80% code coverage**
- Integrated Stripe for secure and seamless payment processing, handling both transactions and subscriptions

Mobile Development Intern - JMV L *June 2023 - Dec 2023*

- Built a cross-platform mobile application using Flutter, delivering a smooth and responsive UI with consistent performance across Android and iOS
- Integrated **15+ REST APIs** for real-time data handling, authentication, and core app functionality
- Implemented Bloc/Provider state management, reducing memory leaks and improving app stability by **20%**.

Projects

Inventory Management System [Github](#)

- Transformed a manual paper workflow into a digital system by developing a web-based admin portal for managing employees, items, and approvals
- Implemented robust JWT authentication with token rotation for secure, role-based access control
- Automated deployments using GitHub Webhooks and Nginx, reducing manual server overhead by **5 hours/week**.
- Optimized inventory search with Debouncing and server-side filtering, **reducing API hits by 60%** during user queries

Education

Bachelor of Technology (B.Tech) *Computer Science*
The NorthCap University *Aug 2020 - June 2024*
